

Oldham CCG Clusters 1-5 Health Profiles using National General Practices Profile and Quality Outcomes Framework 2017/18

CCG Cluster 1 (South) Profile, February 2019

Cluster 1 (South) Summary

CCG Cluster 1 average deprivation score is far higher than Oldham CCG average. Across the GPs the lowest score was found at Hopwood House (37.9) and the highest at Hill Top Surgery (48.6).

Life expectancy in males and females is less than the Oldham average across all Cluster 1 GPs except in Hollinwood Medical Practice. Average life expectancy in males (75.5) is lower than the Oldham average (77.1) but amongst Cluster 1 females (79.9) life expectancy is similar to Oldham average (80.9) but both sexes are far lower than England (79.4 & 83.1 respectively). Life expectancy amongst males ranged from 73.8 years at Hill Top Surgery to 77.7 years at Hollinwood Medical Practice. Both of these practices hosted respective lows (77.5) and highs (80.8) for life expectancy amongst females.

Cluster 1 average prevalence is **HIGHER** than Oldham CCG average prevalence for the following health conditions: Learning disabilities, Mental Health, Diabetes and Obesity. Where Cluster 1 also had **higher** rates compared to the Oldham CCG average but potentially requiring further local interpretation were in relation to: Emergency hospital admissions for all causes (under 18 years old) 2013/14-2015/16

Cluster 1 average prevalence is **SIMILAR** to Oldham CCG average prevalence for the following health conditions: Dementia, Depression, Longstanding Health Conditions and Asthma. Where Cluster 1 also had **similar** rates to the Oldham CCG average but potentially requiring further local interpretation were in relation to: Females aged 25-64 years with a record of cervical screening (last 5 years); and, A & E Attendance (under 18 years old) 2013/14-2015/16

Cluster 1 average prevalence is **LOWER** than Oldham CCG prevalence for the following health conditions: Cancer (almost half CCG average), CKD, Coronary Heart Disease, Hypertension, Stroke & TIA and COPD. Where Cluster 1 also had **lower** rates than Oldham CCG average but potentially requiring further local interpretation were in relation to: Reporting cancer in the last 5 years; Females aged 50-70 years screened for breast cancer in last 36 months (3 year coverage); and, Persons aged 60-69 years screened for bowel cancer in last 30 months (2.5 year coverage)
